OASIS
Serenity for Feet™

Throughout this catalog look for these “Tech Icons” to easily identify the key features in each of our footwear styles.

Dr. James Lin started Oasis in 2007 with the mission to offer comfort and improved health for his patients. At Oasis we believe that even the healthiest feet can benefit from properly designed medical grade orthopedic shoes. We want to help you be healthy and look good doing it.

Oasis shoes combine fashion sense with exceptional materials and advanced technologies.

Extra-Depth These shoes include a pair of pre-molded inserts and a pair of removable spacers. Removing the spacer will provide extra internal depth and a roomier fit. Both the pre-molded inserts and spacers can be removed to accommodate a custom orthotic.

Slip Resistant Tests by an independent testing laboratory scored minimum results of greater than 0.5 under both wet and dry conditions in accordance with ASTM F1677. These test results are commonly considered “slip resistant” by the U.S. Footwear Industry.

Full Grain Leather The leather used is genuine full grain. Other types of leather have been coated or painted to look like full grain and will ultimately crack or peel. Full grain leather stays looking and performing like new long after the impostors have worn out.

Genuine Suede The exterior of the upper is made of genuine suede, not a synthetic. Suede stays soft and supple longer and, unlike some synthetics, it breathes.

Trek-Dry® The blue fabric lining many Oasis styles is made of Trek-Dry®, an innovative fiber. Body heat activates and enhances its rate of moisture absorption. The smooth soft texture helps reduce the risk of chafing and creates a comfortable environment for the foot.

F.C.T. Technology Our Foot Cradle Technology combines a thermoplastic heel cup with a compression-molded EVA midsole. The result is a flexible forefoot and stable rearfoot. Shoes with FCT also have polymer gel pads situated under the ball of the foot for additional comfort and protection.

Stretch Vamp The forefoot of these styles is made of an elastic fabric. These styles are ideal for feet with bunions or any condition that requires a little stretch.

Arch Support Insert The removable inserts included as “standard equipment” with these styles has a raised arch support and contoured heel cup to provide support and help realign the foot into a neutral position. This helps reduce pain in lower extremity joints.

Grasp Outsoles of these styles are made of a special polymer, formulated after extensive testing, which provides excellent cushioning. It is more durable and provides better traction than the more common alternatives used by our competitors.
